

**Purpose:** It is the intention of this Administrative-Master Syllabus to provide a general description of the course, outline the required elements of the course and to lay the foundation for course assessment for the improvement of student learning, as specified by the faculty of Wharton County Junior College, regardless of who teaches the course, the timeframe by which it is instructed, or the instructional method by which the course is delivered. It is not intended to restrict the manner by which an individual faculty member teaches the course but to be an administrative tool to aid in the improvement of instruction.

**Course Title - Industrial Electronics**

**Course Prefix and Number - ELMT 2433**

**Department – Electronics Engineering Tech.**

**Division – Technology and Business**

**Course Type: (check one)**

- Academic General Education Course (from ACGM – but not in WCJC Core)
- Academic WCJC Core Course
- WECM course (This course is a Special Topics or Unique Needs Course: Y or N)

**Semester Credit Hours # : Lecture hours# : Lab/other hours #     4:3:3**

**Equated Pay hours for course – 4.5**

**Course Catalog Description -** A study of devices, circuits, and systems primarily used in automated manufacturing and/or process control including computer controls and interfacing between mechanical, electrical, electronic, and computer equipment. Presentation of programming schemes. Analog and digital control loops and their application in process control and robotics. Microprocessors for control and monitoring. Sensing devices for pressure, level, flow, temperature, and position. Signal processing: A/D and D/A conversion, feedback, and servos. Laboratory work includes microprocessor and robotics interfacing and control circuits.

List Lab/ Other Hours
Lab Hours 3
Clinical Hours
Practicum Hours
Other (list)

**Prerequisites/Co requisites - - Credit for CETT 1457.**

**Approvals – the contents of this document have been reviewed and are found to be accurate.**

Prepared by David Kucera	Signature 	Date 05/20/2010
Department Head David Kucera	Signature 	Date 05/20/2010
Division Chair Stephanie Dees	Signature 	Date 7/23/2010
Vice President of Instruction or Dean of Vocational Instruction Leigh Ann Collins	Signature 	Date 9/29/10

**I. Topical Outline** – Each offering of this course must include the following topics (be sure to include information regarding lab, practicum, clinical or other non-lecture instruction):

The following performance will be expected of any student completing this course with a passing grade. There is no absolute time limit on the performance of these objectives, unless noted, but the grade received by the student will depend, in part, on the relative speed and precision of the student's performance in these tasks. Where subjective evaluations are indicated, the instructor will make these judgments based on his or her knowledge of the skills required to place a graduate with the expectation of successful on-job performance.

The student will be expected to perform the following tasks in written examination or laboratory demonstration:

Solid-state devices and circuits

Programmable controllers

Thyristors

Lasers

Fiber optics

Power supplies

Op-amp circuits

Open- and closed-loop feedback systems

Input devices

Output devices

AC and DC motors

Motor control devices

Robots and other motion control systems

Data communications

**II. Course Learning Outcomes**

Course Learning Outcome	Method of Assessment
<p>Describe how electronic input and output circuits are used to control automated manufacturing and/or process systems;</p> <p>Identify basic elements used for input, output, timing, and control;</p> <p>Define how programmable electronic systems use input data to alter output responses;</p> <p>Troubleshoot a representative system; and demonstrate how system operation can be altered with software programming</p>	<p>Assessed in Capstone Experience: CETTT 2370 Final Project course.</p>

**III. Required Text(s), Optional Text(s) and/or Materials to be Supplied by Student.**

An electronics text covering Industrial Electronics. Example: Industrial Electronics by Frenzel

Calculator – scientific with Sine, Cosine, Tangent capabilities

**IV. Suggested Course Maximum - 30 lecture, 15 laboratory**

**V. List any specific spatial or physical requirements beyond a typical classroom required to teach the course.**

Lecture facilities for 30 students. Laboratory facilities for 18 students must include 9 bench positions each with a digital meter, logic probe, 20 MHz oscilloscope and probes, breadboarding facility with power supply and signal generator, and a stock of basic AC circuit components.

**VI. Course Requirements/Grading System – Describe any course specific requirements such as research papers or reading assignments and the generalized grading format for the course**

Evaluation of Performance:

Course grades will be determined by the percentage of course objectives for which the student can demonstrate mastery and by attendance as stated in the Departmental Policy sheet provided to the student. Mastery of course objectives will be determined by written examinations, physical soldering exams, an attendance grade as described in the Departmental Policy handout, a daily work grade which will include graded homework, graded laboratory work, and a comprehensive final exam.

Approximate Grade Evaluation Summary:

Major tests .....	60%
Attendance.....	10%
Lab reports, homework, and quizzes. ....	15%
Comprehensive Final examination .....	15%

**VII. Curriculum Checklist**

- **Academic General Education Course** (from ACGM – but not in WCJC Core)  
No additional documentation needed

- **Academic WCJC Core Course**  
Attach the Core Curriculum Checklist, including the following:

- Basic Intellectual Competencies
- Perspectives
- Exemplary Educational Objectives

- **WECM Courses**  
If needed, revise the Program SCANS Matrix & Competencies Checklist.
